

Automated CIS compliance for Windows devices.

Compliance that actually works for Windows.

From misconfigured devices to unpatched vulnerabilities, even a single overlooked setting can expose the entire network. Scalefusion Veltar brings order to this chaos, automating CIS compliance so Windows security isn't left to chance. With Veltar, CIS compliance for Windows endpoints is always-on and automated.

When Windows compliance gets complicated.

Endpoint security gaps
Users disable Windows Defender or antivirus tools to run apps, leaving sensitive data exposed.

Missed updates and patches
Remote or hybrid devices often skip critical Windows updates, leading to audit failures and vulnerabilities.

Configuration drift
Firewall misconfigurations, weak local admin policies, or unapproved software installations create entry points for attackers.

IT fatigue
Manual compliance checks against CIS benchmarks consume hours of IT and SecOps time, delaying remediation.

Automate. Enforce. Remediate.

Whether it's enforcing BitLocker encryption, validating firewall rules, or ensuring protection is active and up-to-date, Veltar continuously monitors, detects, and remediates compliance gaps before they impact your business.

45+ prebuilt CIS rules
CIS Level 1 and 2 benchmarks for Windows devices — fully automated, no scripting required.

Real-time monitoring & auto-remediation
Detect compliance gaps instantly and remediate issues automatically, before they become incidents.

Customizable CIS controls
Tailor benchmarks to your organization's risk appetite, business requirements, and internal policies.

Audit-ready dashboards
Track compliance metrics, generate reports, and demonstrate audit readiness in minutes, not days.

ITOps and SecOps, unified.

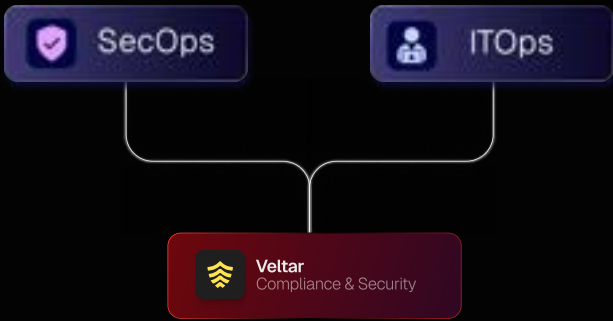

Set it, forget it, and scale confidently:

- ✓

Full device visibility
See compliance posture for every Windows endpoint in real time.
- ✓

Proactive risk management
Act on misconfigurations before they escalate into breaches.
- ✓

Always audit-ready
Be prepared for regulatory checks or internal audits without last-minute firefighting.

Enforce CIS compliance on Windows devices.

01

Enable monitoring
Turn on CIS compliance automation from the dashboard.

02

Apply benchmarks
Select CIS policies for Windows devices.

03

Scan & detect risks
Identify compliance violations in real time.

04

Auto-remediate
Fix issues automatically or alert IT for further action.
