

Device Trust from Android Enterprise

Secure enterprise access and complete device trust for every Android device.

How device trust with Scalefusion translates to security gains for Android.

- ✓ Every Android device accessing work data is verified, compliant and secure.
- ✓ Even if a device is lost, outdated or compromised, data remains protected.
- ✓ Automated compliance and risk detection eliminate manual checks.
- ✓ Teams get secure access to work apps, without productivity trade-offs.
- ✓ Trust extends seamlessly across all Android devices, corporate or BYOD.
- ✓ Manage and enforce every trust policy effortlessly from a single dashboard.

The complete device trust package.

Verified enrollment.

Onboard Android devices, corporate or BYOD, through Zero-Touch, QR, or email-based enrollment, ensuring devices are provisioned through verified channels.

Policy & profile configuration.

Define trusted device behavior and apply app, network, and security rules automatically by user role or ownership type.

Verified device access & conditional access.

Grant access only to devices meeting security and compliance benchmarks, integrated with identity verification for zero trust access.

Continuous trust validation.

Track 20+ device trust signals, OS version, patch level, Play Protect, encryption, and more, to maintain real-time device integrity.

Automated compliance & proactive threat prevention.

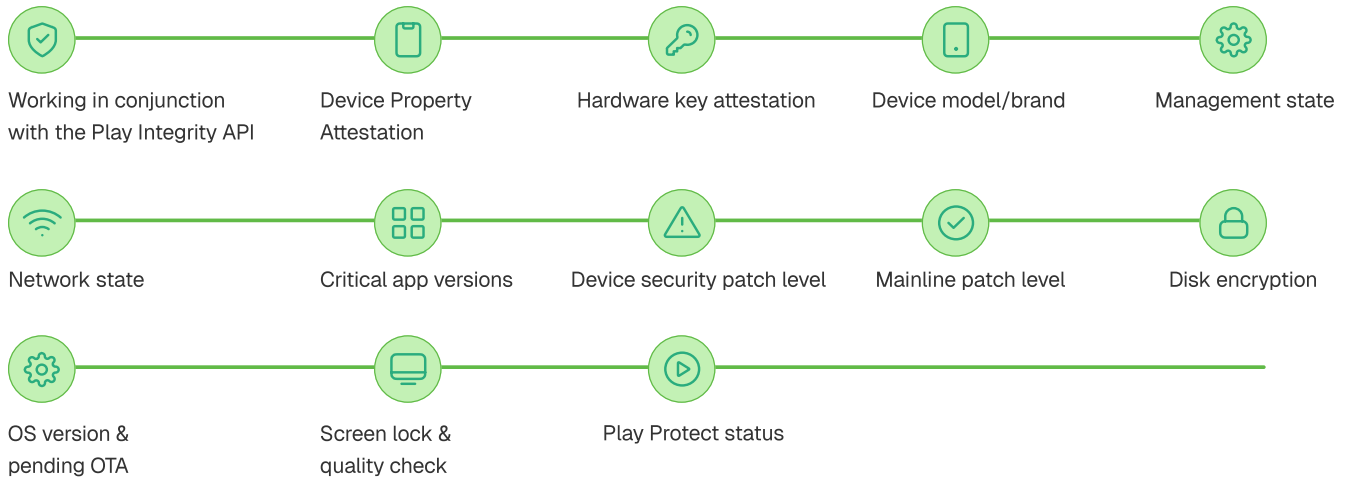

Detect and remediate non-compliant devices instantly, while monitoring posture and triggering automated actions to neutralize threats before they spread.

Unified visibility & management.

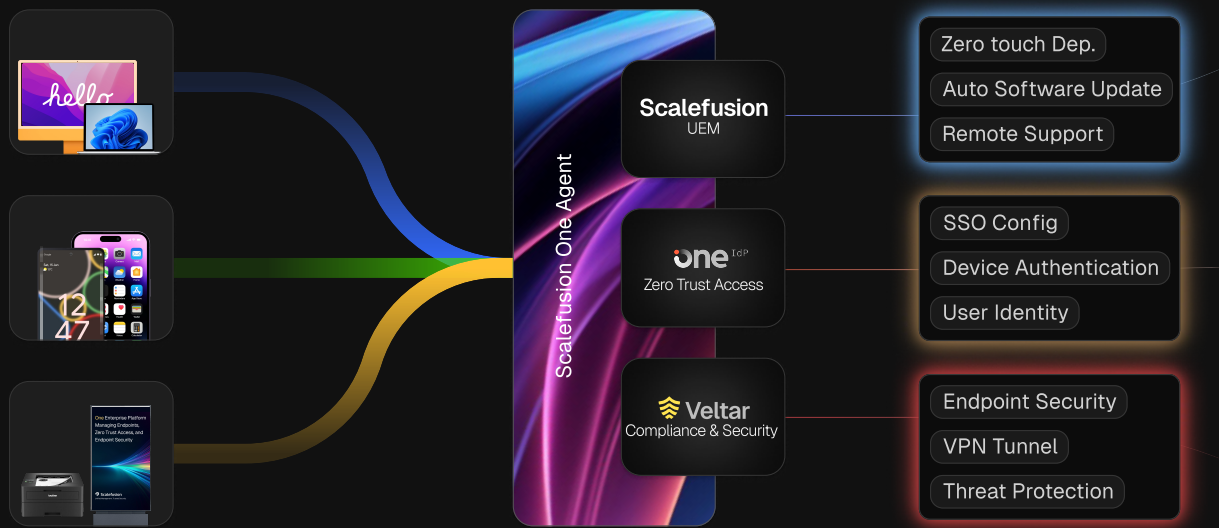

Monitor device status, compliance, and trust posture across all Android devices through a single, audit-ready dashboard.

Extend device trust signals to all Android devices.

Compatibility and security for all Android devices.

Scalefusion ensures consistent trust, compliance and protection across every Android endpoint.

One platform for all Android device trust needs.
