Industry: Trucking and logistics
Platforms: Android
Deployment Scenario: Kiosk

About the Company

Based on Mobility-as-a-Service model, Scania Go is a transportation service/app that aims to drive more sustainable and efficient travel between buildings in the Scania area. The service is associated with a travel app that helps employees/visitors plan their journey and travel within the Scania compound by shuttle buses, ebikes, comfort cars or Scania Job Express. Apart from planning one’s journeys, there are other tasks that employees/visitors can do using Scania such as check upcoming departures from bus stations, check real-time vehicle-location update, view Outlook meetings and check latest traffic situations.

Challenges

Scania Go wanted to lock their Android tablets mounted on the company vehicles so the devices are not misused or tampered by anyone. At the same time, they wanted to control/disable the hardware button on those devices and wanted to remotely monitor the devices and the way data was being used through those devices. Overall, securing, monitoring and managing the vehicle mounted devices was the major challenge that they wanted to eliminate.

Solution

Scania found Scalefusion as the most apt solution that successfully helped the company mitigate all the challenges. Using Scalefusion MDM, Scania could effectively lock their Android-based corporate-owned tablets mounted on the vehicles used within the company compound. Scania found Scalefusion easy to install & they readily started using the app just after the download. Scalefusion enabled the company to remotely lock & monitor the tablets along with the vehicles. Additionally, it also allowed for disabling/control of hardware buttons on the tablets. Scania could seamlessly create profiles from the dashboard & deploy the same on multiple tablets, using Scalefusion. They also leveraged the GPS location-tracking feature to track the vehicles in real time.

Business Goal

Scania Go as a mobility solution is focused on offering a seamless transportation experience to its logistics workforce as well as the internal employees/visitors by allowing them to schedule, manage & monitor their travel between the buildings inside Scania compound/area. Now, the company was searching for a solution that would help it manage, secure and track usage of the corporate-owned tablets mounted on Scania vehicles, so they are used with proper restrictions and for business purposes only.

Key Results

Working with Scalefusion has brought out the following proven results for Scania:

- Enhanced transport management
- Improved time efficiency
- Enhanced scope of device security
- Improved control over device and data usage

About Scalefusion

Scalefusion MDM allows organizations to secure & manage endpoints including smartphones, tablets, laptops, rugged devices, POS, and digital signages, along with apps and content. It supports the management of Android, iOS, macOS and Windows 10 devices and ensures streamlined device management operations with Remote Troubleshooting.
