

Upgrade to Windows 11 securely with Scalefusion

Helping you transition seamlessly to Windows 11 before Windows 10 reaches end-of-life in October 2025

What if you don't upgrade in time?

Microsoft will no longer provide free updates, security patches, or technical support for Windows 10 after October 2025.

Devices will still work but without support, they're exposed to risks.

Over half of enterprise devices now run Windows 11—a 16.8% in 2025—showing IT teams aren't waiting till the last minute.

What's at stake if you wait too long

Security exposure

No patches means every vulnerability is a potential breach.

Compatibility issues

Apps and services will stop working as vendors shift to Windows 11-only support.

Compliance risk

Staying on unsupported OS versions will break policy requirements and audit readiness.

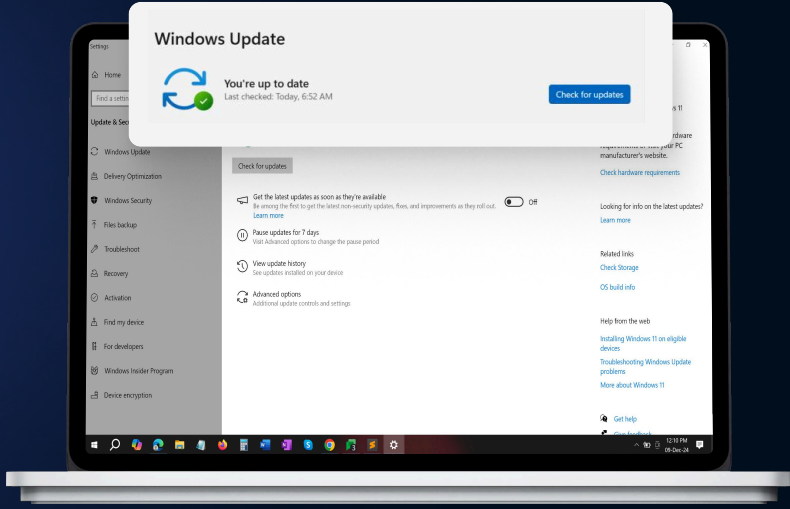

Let Scalefusion do the upgrade math

We've upgraded our OS Update & Patch Management capabilities to make mass Windows 11 upgrades easy, automated, and fully trackable.

Centralized OS upgrade management

Manage Windows 11 upgrades across thousands of devices directly from the Scalefusion dashboard.

- Schedule OS upgrades at scale
- Automate retries for failed upgrades
- Customize user prompts and upgrade alerts
- Track real-time upgrade status per device
- Enable policy-based rollbacks for safer transitions
- Optimize bandwidth usage across sites and remote teams

What you can configure

- Choose the Windows 11 version to deploy (21H2, 22H2, 23H2<default>, or 24H2)
- Set installation schedules by day/time/week
- Enable user deferrals and retry attempts
- Apply settings globally or at the profile level

A four-phase approach to Windows 11

Scalefusion provides a proven four-step approach that ensures a seamless transition.

1. Pre-upgrade planning

- Audit current OS versions across the devices
- Simulate upgrade readiness to catch blockers early
- Group devices based on user roles, location, or hardware compatibility

2. Managed deployment

- Create smart groups and define phased rollout windows
- Schedule upgrades during low-usage hours
- Push updates silently, with bandwidth throttling if needed

3. Remote monitoring

- Track real-time device logs and upgrade status
- Receive alerts for failures or stalled installs
- Identify and act on issues proactively

4. Post-upgrade validation

- Confirm successful OS upgrade and patch version
- Re-verify compliance with existing security and policy baselines
- Trigger automated remediation for any non-compliant devices
- Maintain audit readiness with continuous compliance checks

Still in doubt? Legacy tools can't keep up. Scalefusion can.

Capability	Legacy Tools	Scalefusion
Upgrade scheduling	Manual via GPO/scripts	Policy-driven, automated rollouts
Device grouping	Static, needs rework	Dynamic smart groups by device profile/role/location
Readiness scanning	Manual scripts & audits	Built-in OS compatibility checks
Upgrade monitoring	Fragmented or delayed logs	Real-time progress tracking & alerts
Rollback options	Risky, often unavailable	Reliable, pre-configured rollback and recovery options
Compliance reporting	After deployment	Audit-ready, live compliance status

We're ready to support every step of the upgrade

Upgrading to Windows 11 is a big shift. However, it doesn't have to be complicated. Scalefusion is prepared to support you through every stage of the transition.

Act now & upgrade confidently, contact Scalefusion today!
