

Veltar Endpoint DLP. Prevent data leaks at the source.

Veltar Endpoint DLP protects your enterprise data where risks actually occur — at the endpoint. Built-on Scalefusion UEM, it restricts USB drives, external hard disks, peripheral devices or other I/O interfaces and ensures granular control, with real-time policy enforcement.

Security without friction.

Device access control

Block or allow USB ports, external storage, and I/O devices to prevent unauthorized use. Enforce read & write, read only, or deny, for all storage devices connected to endpoints. No more blind spots.

Granular permissions

Apply differentiated rules by user, role, device group, or device type. Allow flexibility for trusted users while restricting high-risk activities.

Encryption enforcement

Automatically allow only encrypted drives for data transfers. Safeguard files even when they leave your environment.

Conditional rules

Trigger policies based on multiple conditions - IP address, day/time, location, product ID, vendor ID, and more. Prevent non-compliant endpoints from transferring sensitive files.

Trusted exceptions

Allow access to specific trusted devices that are essential for work while keeping all other I/O devices blocked.

Audit logs

Generate detailed logs of every data movement. Provide CISOs and compliance officers with clear audit trails for GDPR, HIPAA, or ISO certification needs.

The Veltar advantage: Endpoint DLP that works for you.

UEM-native DLP

Built into Scalefusion's unified endpoint management stack, eliminating the complexity of standalone DLP tools. Deploy once, enforce everywhere.

Adaptive, conditional enforcement

Policies respond in real time to device trust, user role, and security posture — ensuring zero-trust readiness at the endpoint level.

Granular control without productivity loss

Strike the right balance: prevent risky data transfers while allowing safe, business-critical workflows to continue unhindered.

Future-proof protection

Designed for hybrid and remote-first enterprises, where traditional network-based DLP tools fail to protect roaming endpoints.

Safeguard your enterprise data with Veltar
Endpoint DLP.
