

Beyond UEM: Foster compliance, endpoint DLP, and secure web access with Veltar.

The modern enterprise demands proactive compliance, secure web access for every user, everywhere and airtight data protection. Built to extend Scalefusion UEM, Veltar unifies compliance, data loss prevention, and web security into a single, intelligent security layer without adding complexity.

UEM gives visibility and control, but threats evolve.

Compliance drift

Configurations change fast, policies fall out of sync, and audits expose gaps.

Data exposure

Files move beyond the corporate perimeter — into browsers, email, and external drives.

Unsafe web access

Users connect from unmanaged networks, bypassing VPNs and introducing risk.

SWG features that actually solve endpoint challenges.

Automated compliance. Put compliance on autopilot.

Enforce CIS benchmarks across Windows, macOS, iOS, and Android. Monitor posture in real time and auto-remediate non-compliance before it becomes a breach. Generate audit-ready reports in a click — no scripts, no manual checks.

Secure the web, one click at a time.

Block access to malicious, non-compliant, or risky websites. Apply category-based filtering and real-time threat intelligence to prevent data exfiltration. Enable policy-based browsing that protects users without restricting freedom

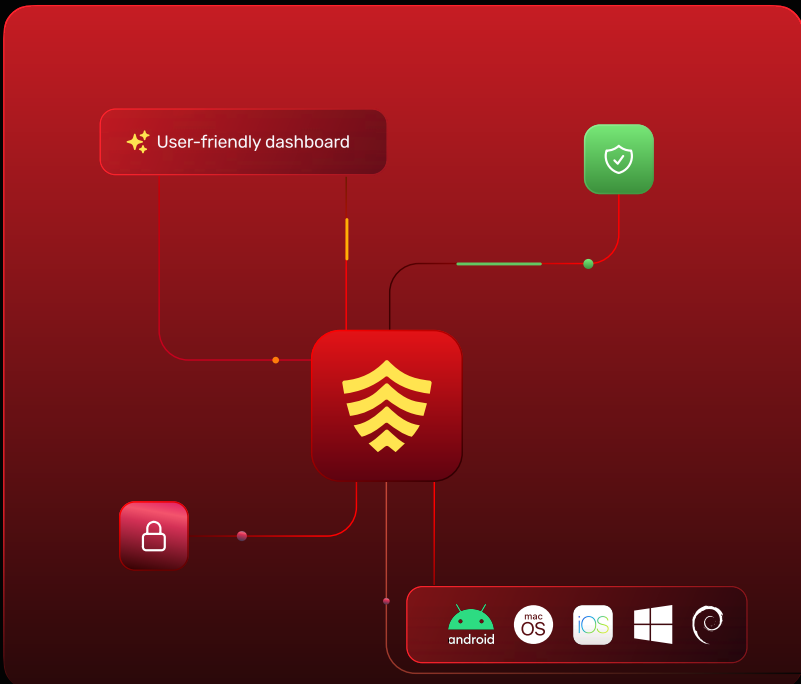

Stop data leaks where they start.

Control copy, share, and transfer actions across USB, hard drives and peripheral devices. Enforce contextual policies based on user, device, and location. Gain full visibility into data movement across your endpoints — without slowing productivity.

One platform. Unified visibility.

Veltar breaks the silos between IT and Security — giving CISOs, IT managers, and admins a shared command center. From compliance scores to DLP incidents and web access logs, every insight lives in a single, unified dashboard.

Purpose-built on Scalefusion UEM

Native integration with Scalefusion UEM

Leverage existing device policies and controls to enforce endpoint-centric security.

Deploy and scale instantly

Scale with your endpoints without any additional infrastructure or overhead.

See every endpoint. Secure every action.

Ensure consistent protection and zero trust alignment across every device and connection.

Go beyond management. Secure what matters.
