

Relentless endpoint security. Not just another layer.

Modern security isn't built on reaction — it's built on prevention. Veltar is an endpoint security solution. Seamlessly integrated with Scalefusion UEM, Veltar brings security and compliance together in one unified platform.

Challenges

The silent failure of fragmented security.

It's working, but it's broken. Complexity is mounting, visibility is fading, and your resources are stretched thin. Let's fix that.

- ✔ No granular precision to block harmful and malicious web content
- ✔ Fragmented security tools that lack native UEM integration
- ✔ Siloed policies causing compliance gaps and oversight
- ✔ Inconsistent compliance standards across regions
- ✔ Frequent regulatory updates demanding constant adjustments
- ✔ Manual tracking of compliance benchmarks and lack of audit readiness

Endpoint security. From the inside out.

Veltar isn't just a layer of defense. It's a system of certainty. A stronger approach to endpoint security, designed for ITOps and SecOps leaders.

Automated Endpoint Compliance

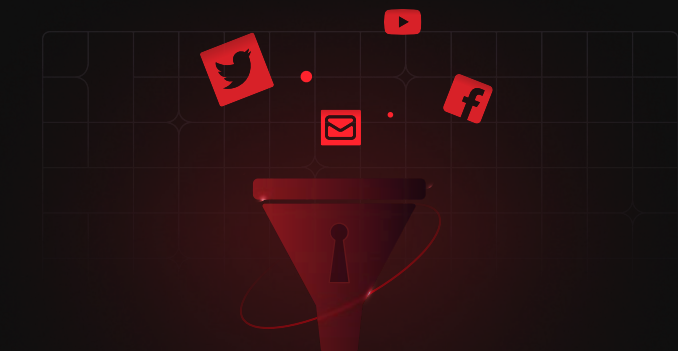

Stay audit-ready, always.

Achieve security excellence by enforcing CIS Level 1 compliance on macOS, iOS, and iPadOS, all directly within Scalefusion UEM.

Web Content Filtering

Block threats before they begin.

Shield users from malicious domains, phishing sites, and non-work-related distractions. Veltar delivers granular web access controls with customizable policies across networks, geographies, and user roles.

I/O Device Access Control

Close the backdoor.

Prevent data exfiltration and malware injection by controlling physical ports. From USB drives to Bluetooth and printers, Veltar gives you granular control over every I/O channel — globally or per device.

Application Control for macOS

Define what runs. Stop what doesn't.

Allow only trusted applications. Block everything else. Strengthen security with App Control for macOS, leveraging the macOS Endpoint Security Framework (ESF.)

VPN Tunneling

Secure your data path. Everywhere.

Enforce private, encrypted tunnels for secure access to your on-prem resources on managed devices. Ensure all traffic flows through your trusted perimeter, always.

Integrated security tools

All your preferred security tools and extensions in one place. Strengthened mobile security with seamless integration of Checkpoint Harmony Mobile's advanced Mobile Threat Defense (MTD) solutions.

Elevate your endpoint security.
